

RIGLOCK

RigLock

The FHE RigLock™ safely and quickly connects your pressure control equipment to the wellhead. With a unparalleled design, the RigLock™ makes rigging up and down more efficient while adding unmatched safety measures to protect your team from costly injuries.

IMPROVED SAFETY THROUGH INNOVATION

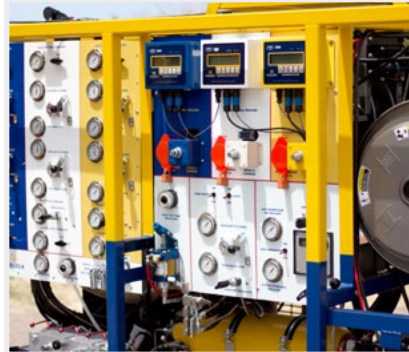

Safety is the underlying core value at FHE. Every piece of equipment we design, engineer, and manufacture is created to ensure the safety of those working at the well site. The RigLock™ is no exception. Through our research, FHE calculated a high number and frequency of injuries that occurred during the rig up and down processes.

To help improve this situation and save your team from devastating and costly injuries, FHE developed the RigLock™, a safe, quick wellhead connection.

The RigLock™ removes individuals from the dangerous and compromised position of connecting by hand unsecured equipment to the wellhead. The RigLock™ securely attaches these tools

CAM LOCKS SECURE THE CONNECTION AND ARE REINFORCED WITH THE MECHANICAL RING LOCK.

THE RIGLOCK MECHANISMS ARE CONTROLLED WITH A UNIQUELY DESIGNED HYDRAULIC CONTROL UNIT.

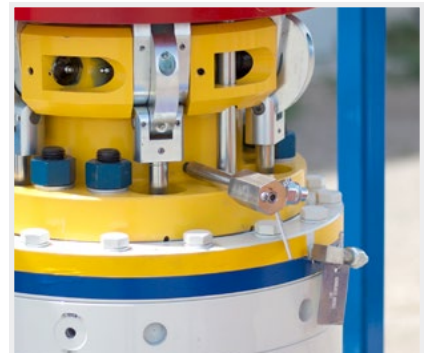

SPEED UP YOUR WIRELINE OPERATIONS BY USING MULTIPLE RIGLOCKS ON THE SAME WELL PAD.

THE RIGLOCK REPLACES THE PUMP IN SUB WITH LARGE AUXILIARY PORT.

ALL THE NECESSARY ACCESSORIES ARE STORED CONVENIENTLY IN THE RIGLOCK TOOLBOX.

WITH AN INTEGRATED REGULATOR, THE RIGLOCK CAN TAKE THE PLACE OF YOUR QUICK TEST SUB.

and equipment with remote hydraulic actuation. The locking connection maintains the pressure for you beginning your wireline operations.

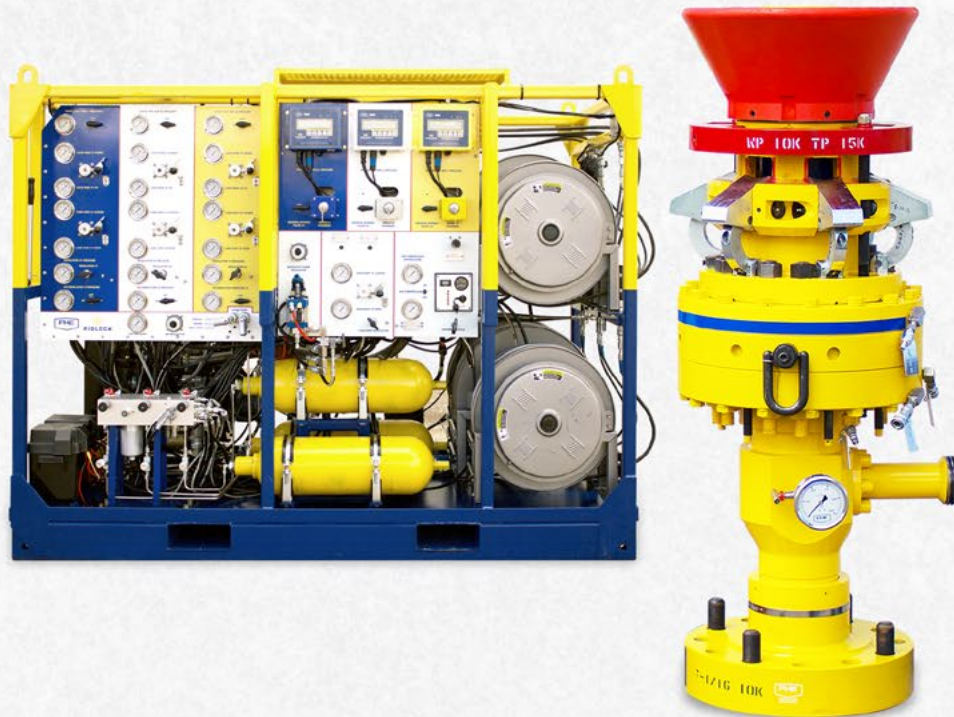

TREMENDOUS GAINS IN EFFICIENCY

The RigLock™ speeds up all well work by quickly connecting and disconnecting your equipment string and the wellhead. The RigLock™ adapter drops in easily to the oversized, highly visible entry guide. The six hydraulic cams seals the connection remotely. The locking ring drops to mechanically secure the cams locks.

This innovative process eliminates time consuming activities including carefully positioning a technician in place to make this difficult and dangerous connection.

RIGLOCK FEATURES:

- Six hydraulic cam locks connect your equipment to the well head.
- The ring lock drops down to secure the cams even without hydraulic pressure.
- Oversized, highly visible entry guide ensures proper placement.
- Remote actuation keeps technicians from danger.
- Speeds up all well work with quick connections.
- Designed to replaces both your pump in sub and quick test sub.
